

SABELO S'BONISO ZINDELA

Software Development Engineer | Cloud and Data Solutions

Johannesburg, Gauteng | [+27 82 048 2659](tel:+27820482659) | szindela74@gmail.com | [LinkedIn](#)

PROFESSIONAL SUMMARY

Information Systems professional and Software Development Engineer with experience delivering cloud-based solutions for a major South African bank. Skilled in AWS, conversational systems, data flows, system integration, customer-data protection and translating business requirements into technical solutions. Holds a BCom Honours in Information Systems and certifications in AWS, Salesforce and generative AI.

PROFESSIONAL EXPERIENCE

Software Development Engineer

Feb 2024 - Present

NTT DATA | Johannesburg

- Develop and deploy customer self-service solutions for Standard Bank, supporting digital service delivery within a regulated banking environment.
- Delivered the bank's chatbot migration to Amazon Lex, moving the conversational solution fully onto the AWS platform and supporting deployment and integration activities.
- Developed a conversational IVR solution that allows customers to state their needs in natural language and routes them to the appropriate service queue.
- Designed cross-service workflows using Amazon Connect, Amazon Lex, AWS Lambda, Amazon Comprehend and Amazon Bedrock for intent processing, routing and concise agent-facing customer summaries.
- Applied data privacy and security controls to customer interactions, including PII detection and redaction before generative AI processing.
- Translated business and customer-service requirements into technical designs, integrations and deployable solutions across the software development lifecycle.
- Collaborated with business and technical stakeholders to test, troubleshoot and improve cloud solutions and customer journeys.

Software Development Project Contributor

2021 - 2023

Johannesburg Business School Innovation Lab | Johannesburg

- Contributed to multidisciplinary teams delivering technology solutions for external organisations, including CHIETA and SACNASP.
- Helped develop an online assessment platform for CHIETA to support training, assessment and accreditation processes.
- Gathered and interpreted requirements, developed and tested software, resolved technical issues and supported project delivery across multiple initiatives.

Development Software 1A Tutor

Feb 2022 - Jun 2022

University of Johannesburg | Johannesburg

- Supported first-year students with Python, algorithms, programming syntax, practical exercises and structured problem-solving.
- Explained technical concepts clearly, reviewed code and guided students with different levels of technical understanding.

CORE SKILLS

Cloud and conversational platforms: AWS, Amazon Connect, Amazon Lex, AWS Lambda, Amazon Bedrock, Amazon Comprehend, Amazon S3, Amazon DynamoDB, Amazon Redshift, CloudWatch

Data and integration: SQL, SQL Server, data processing, data flows, structured and unstructured data, system integration, REST APIs, reporting

Governance and security: PII protection and redaction, data privacy, cloud security, traceability, monitoring and logging

Development and delivery: Python, JavaScript, C#, Git, SDLC, requirements analysis, testing, troubleshooting, stakeholder collaboration

EDUCATION

Bachelor of Commerce Honours in Information Systems Completed 2025 | Graduated 2026

University of Johannesburg

Advanced study in information systems management, data management, systems analysis, information security and research methods. Developed skills in analysing complex information, evaluating technology and data risks, and translating organisational requirements into technical solutions.

Bachelor of Commerce in Information Systems 2020 - 2024

University of Johannesburg

Built a foundation in information systems, database management, software development, systems analysis and business processes, with practical experience in designing technology solutions and working with data.

SELECTED PROJECT

Conversational IVR for Banking Professional project

NTT DATA

- Developed a voice-led customer journey to reduce reliance on DTMF menus and improve routing to the correct service queue.
- Integrated speech-driven intent handling, customer-query summarisation and agent context across AWS services.
- Supported privacy-by-design through PII sanitisation before customer requests were processed by generative AI services.
- Designed fallback behaviour to preserve service continuity when conversational components were unavailable.

CERTIFICATIONS AND ACHIEVEMENTS

- AWS F1 GameDay Hackathon Winner | Team award | 2024
- AWS Certified Cloud Practitioner | AWS | 2024
- Salesforce Associate Certificate
- GenAI Academy White Belt
- GenAI Academy Yellow Belt Level 1
- Tutoring Certification | CRLA International Tutor Training Program Level 1 | 2023
- Top Programming Talent | University of Johannesburg | 2021

RESEARCH

Strengthening Digital Trust 2025

BCom Honours research

Investigated cloud security challenges and solutions, with focus on digital trust, information protection, privacy, governance and secure cloud adoption.
